for Idaho forest landowners

Douglas-Fir Tussock Moth Outbreak Public Meetings

Thursday,
February 23, 2012

Saturday,
February 25, 2012

6:30 PM

10:00 AM

Lakeside Elementary
School
(1345 E Street in Plummer)

Plummer Community
Center
(520 C Street in Plummer)

The Douglas-fir tussock moth is a native forest insect and needle feeding caterpillar.

It is a major defoliator of grand fir and Douglas-fir trees.

In 2011, the Idaho Department of Lands, Washington State Department of Natural Resources, and the U.S. Forest Service detected new areas with defoliation in Idaho and Washington.

Kootenai, Benewah, and Latah counties in Idaho are affected.
